Documentation

Projects

STATUS	RULE
In Progress	The project has a status of In-Progress unless the project is completed
Completed	All the assets within a project are submitted

Project Summary - Location View - Location Status

STATUS	RULE
In Progress	The user has not submitted all assets for that location within that project
Completed	All the assets within a location are submitted
Invalid Address	Address is not validated or prompted as a future address

Project Summary - Location View - Asset Status

STATUS	RULE
In Progress	Quoted asset: User “accepts quote” and is in the process of configuration Non - quote asset: When a user is in the process of adding and/or configuring assets
Quote Received	Quoted asset: When a quote id has been imported and the user has not “Accepted” it yet. Non - quote asset: N/A
Copying	When a user has chosen to copy an existing asset to a location or when a user has chosen to copy an existing asset’s configuration to a quoted or new asset.
Ready for Order	When a user has saved and finished the asset configuration from the last step of the configuration process.
Submitted	User has submitted the asset for order.
Errors Found	If there are errors found on the RDS (Complete Configuration) screen and the user has left the process to come back later.

Project Summary - Asset Actions

STATUS	ACTION	FUNCTION
In Progress	Continue order	User is taken back to what ever page they left off on within the asset's configuration process. Should have everything they had previously inputed, saved and filled.
Submitted	View order	Shows the user the asset's order summary
Errors Found	Continue order	User is taken back to what ever page they left off on within the asset's configuration process. Should have everything they had previously inputed, saved and filled. From there the user can correct the errors.
Quote Received	View quote	User is taken to the Quote summary screen
Ready for Order	Review	User is taken to the RDS (complete configuration) screen. They can still make edits from here until the end of the configuration process.
Copying	Continue order <i>*Disabled*</i>	User can do nothing. Action is disabled

DOCUMENTATION

Timing + Animations

Toasts

All toasts will have the same animation and timing throughout the application.

-
- 1** Timing - 5 seconds
 - 2** Animation - quick fade in and slight movement upward before resting in place. Then fades when it disappears.

PROJECTS

Project List + Project Creation

Projects

The Projects page is the user’s home base. Here we will be able to surface any relevant information regarding Active Projects, such as statuses and recommended actions. The Dashboard will continue to become more robust as more features are created.

- 1
- Side navigation will be the primary way users navigate between sections of the app. This will also be future place for Tickets, Sites, Quotes, Support, and other items. The site nav will only be available at the top of the site level.
- 2
- User clicks “create new project” to initiate New Project Flow
- 3
- User can toggle between “Active” and “Completed” Projects
- Completed projects are projects that have had all orders within them submitted
- 4
- User can see currently active (incomplete) projects. They can choose an active project to continue where they left off in that project. Projects will be listed alphabetically by alias name. Sorting functionality is a future feature.
- Project list items:
- Project Alias

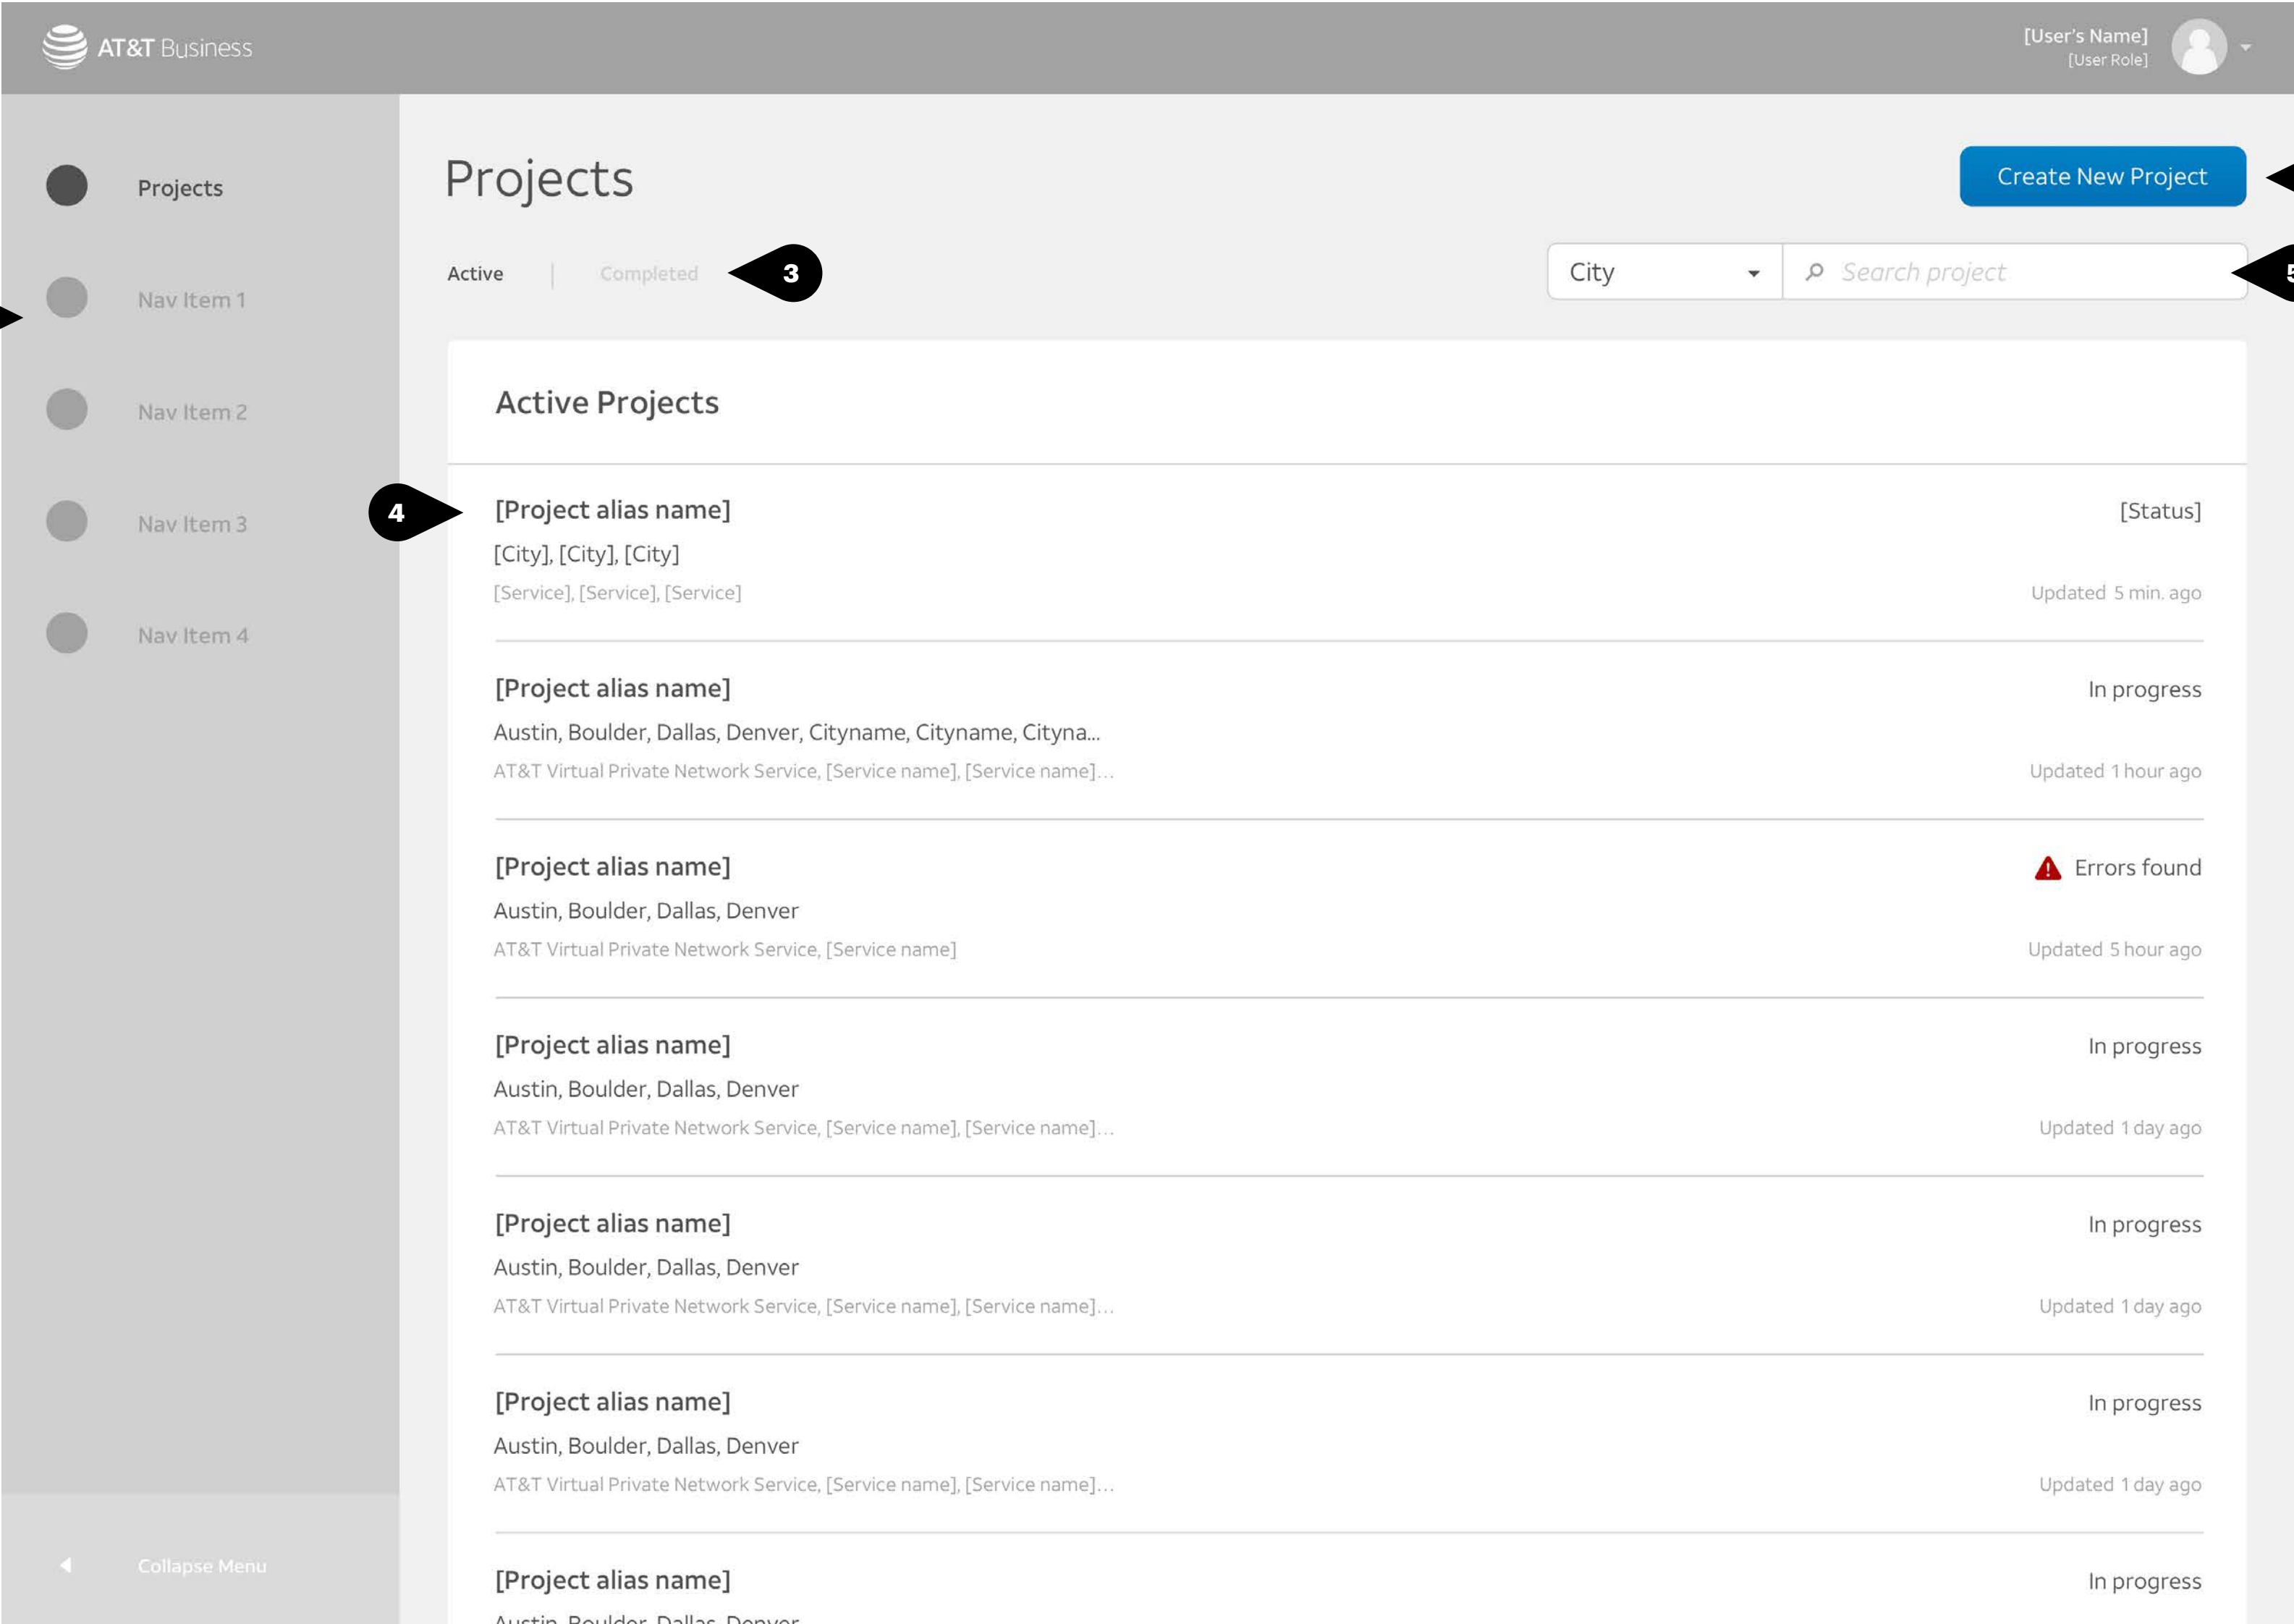

• Cities within project

• Service types within project

• Status (In progress or Errors found)

• Update time stamp
- 5
- User can v *parameters need to be discussed*)

** Status functionality needs further exploration.

PROJECTS

Project List + Project Creation

Projects - Cont.

Shown is a scrolled view of the “Projects” page.

- 1
- Max number of projects in a list will be 20 (can be further discussed with development.

PROJECTS

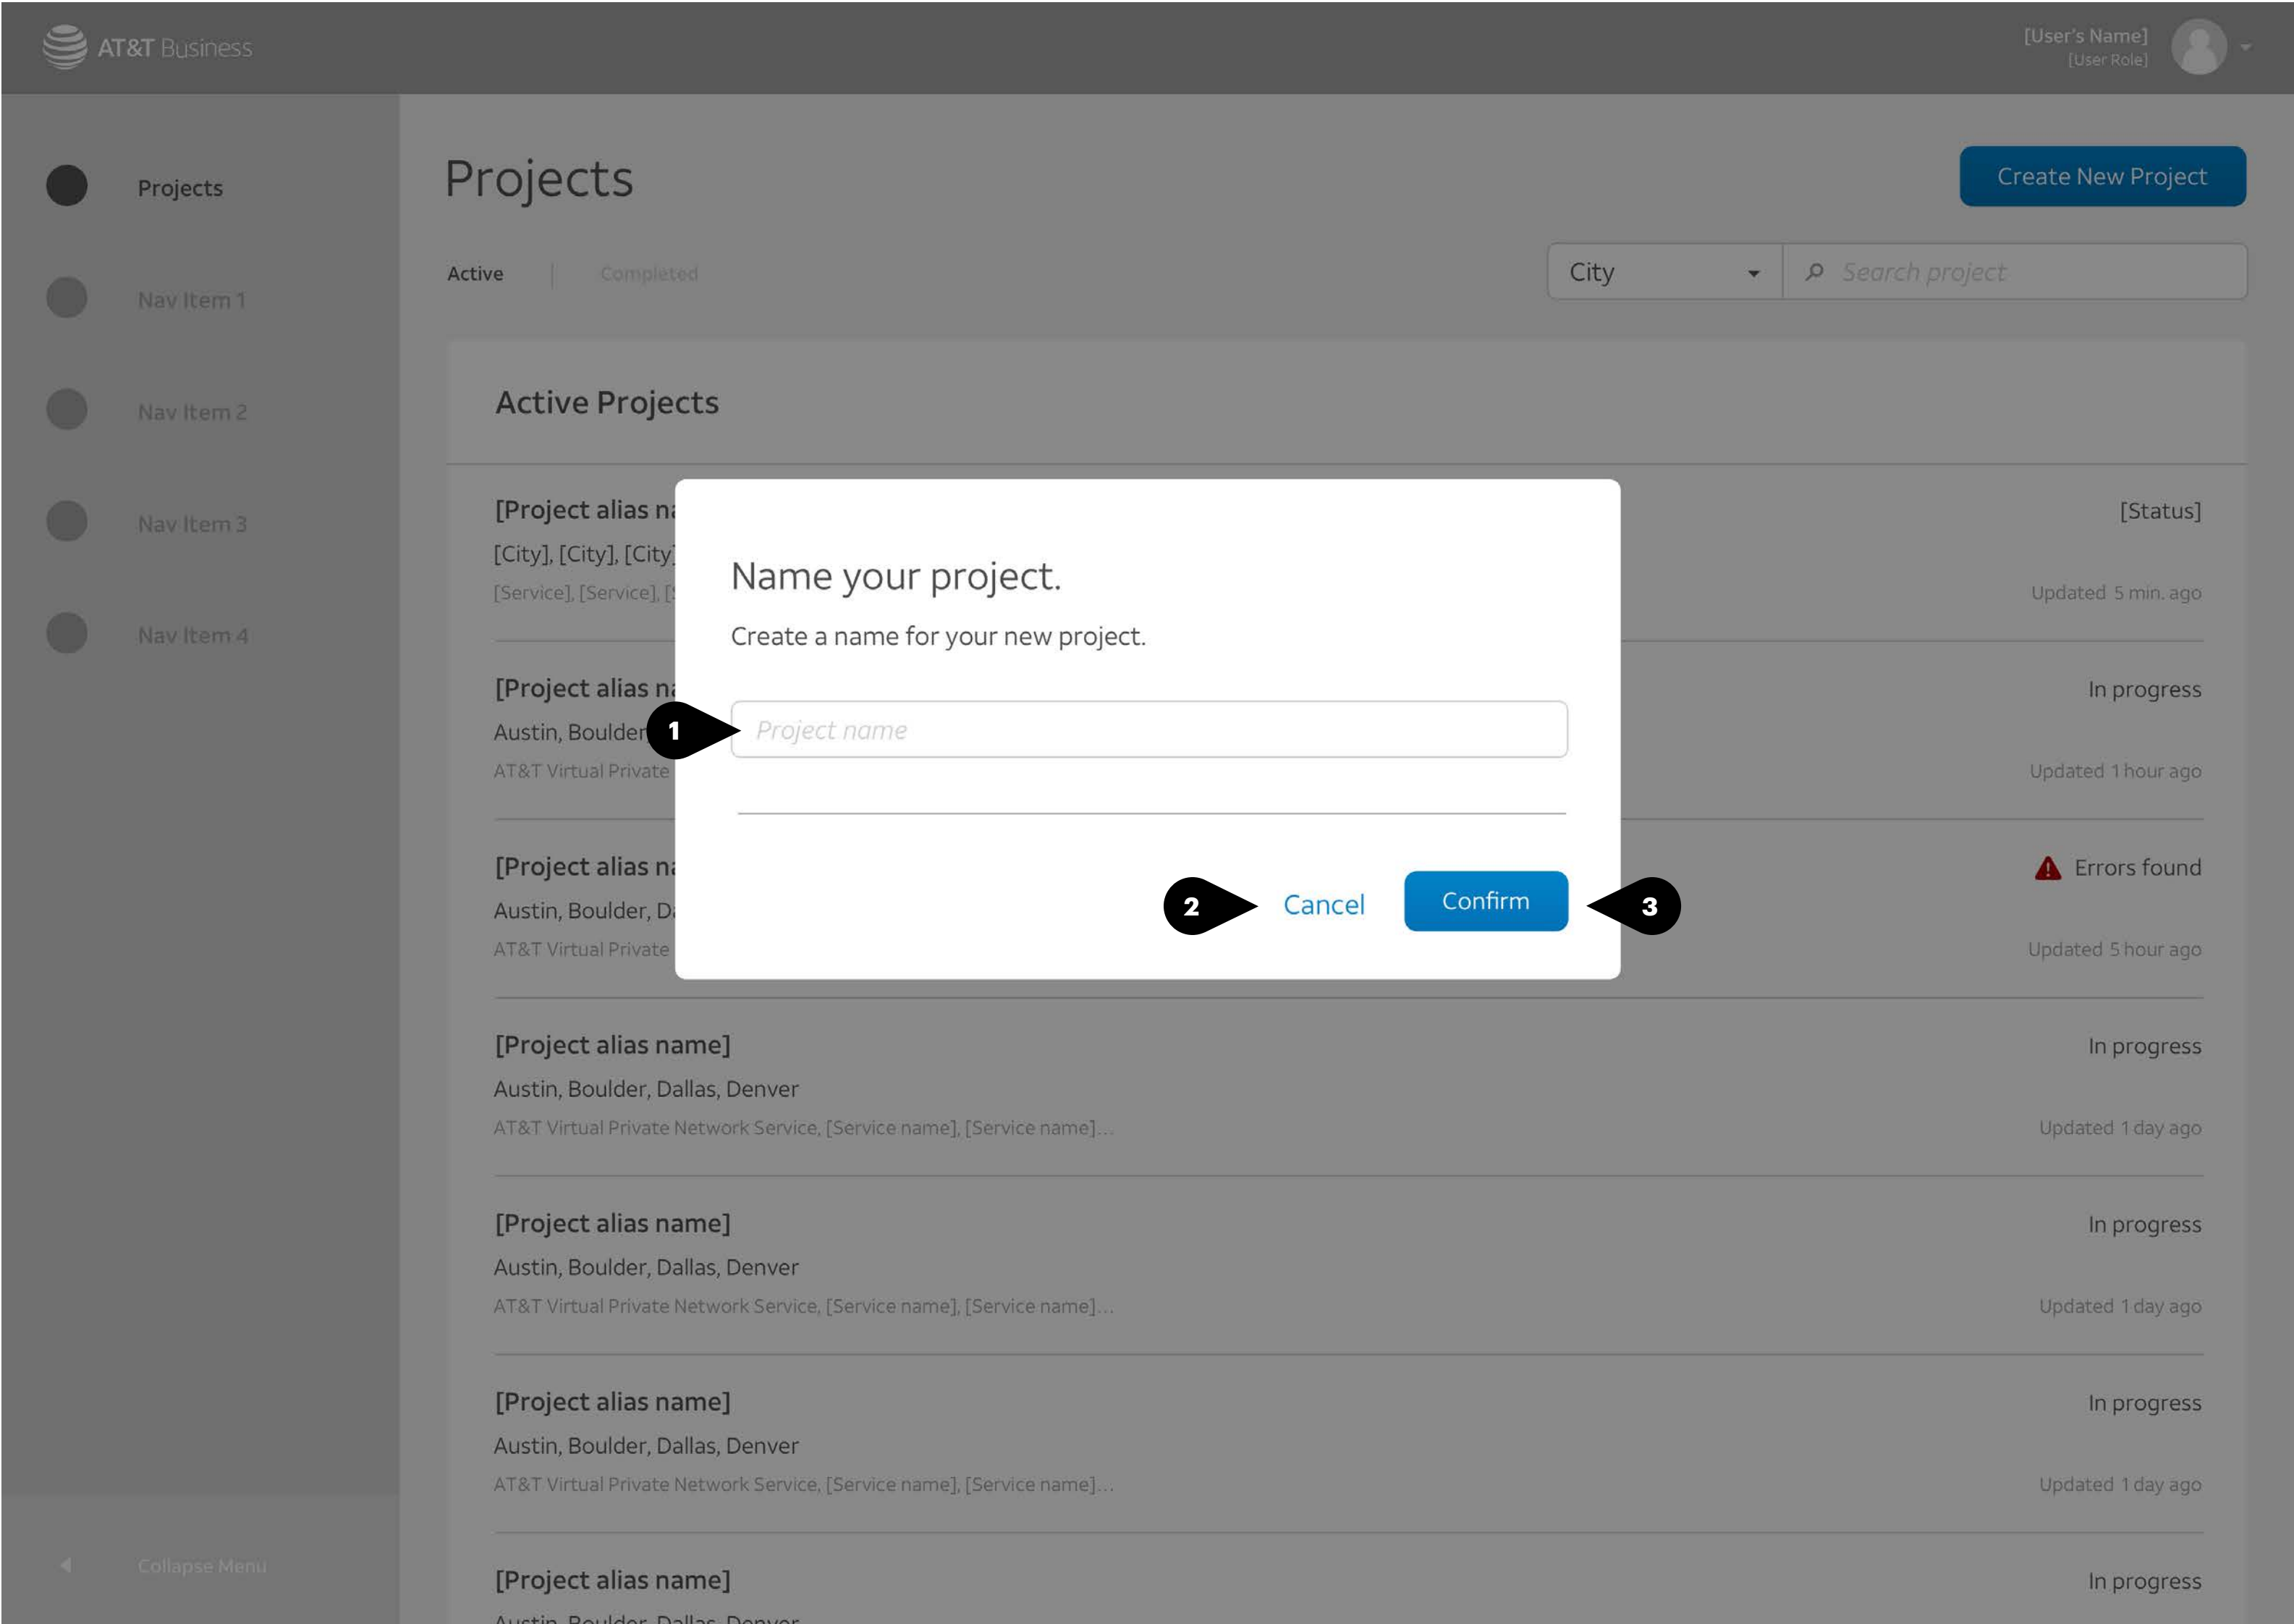

Project List + Project Creation

Project Name Dialog

When the user clicks ‘Create New Project’ they will be prompted to enter a name for their project.

This is solely for the customer to have for quick differentiation between projects. Additional details may be required.

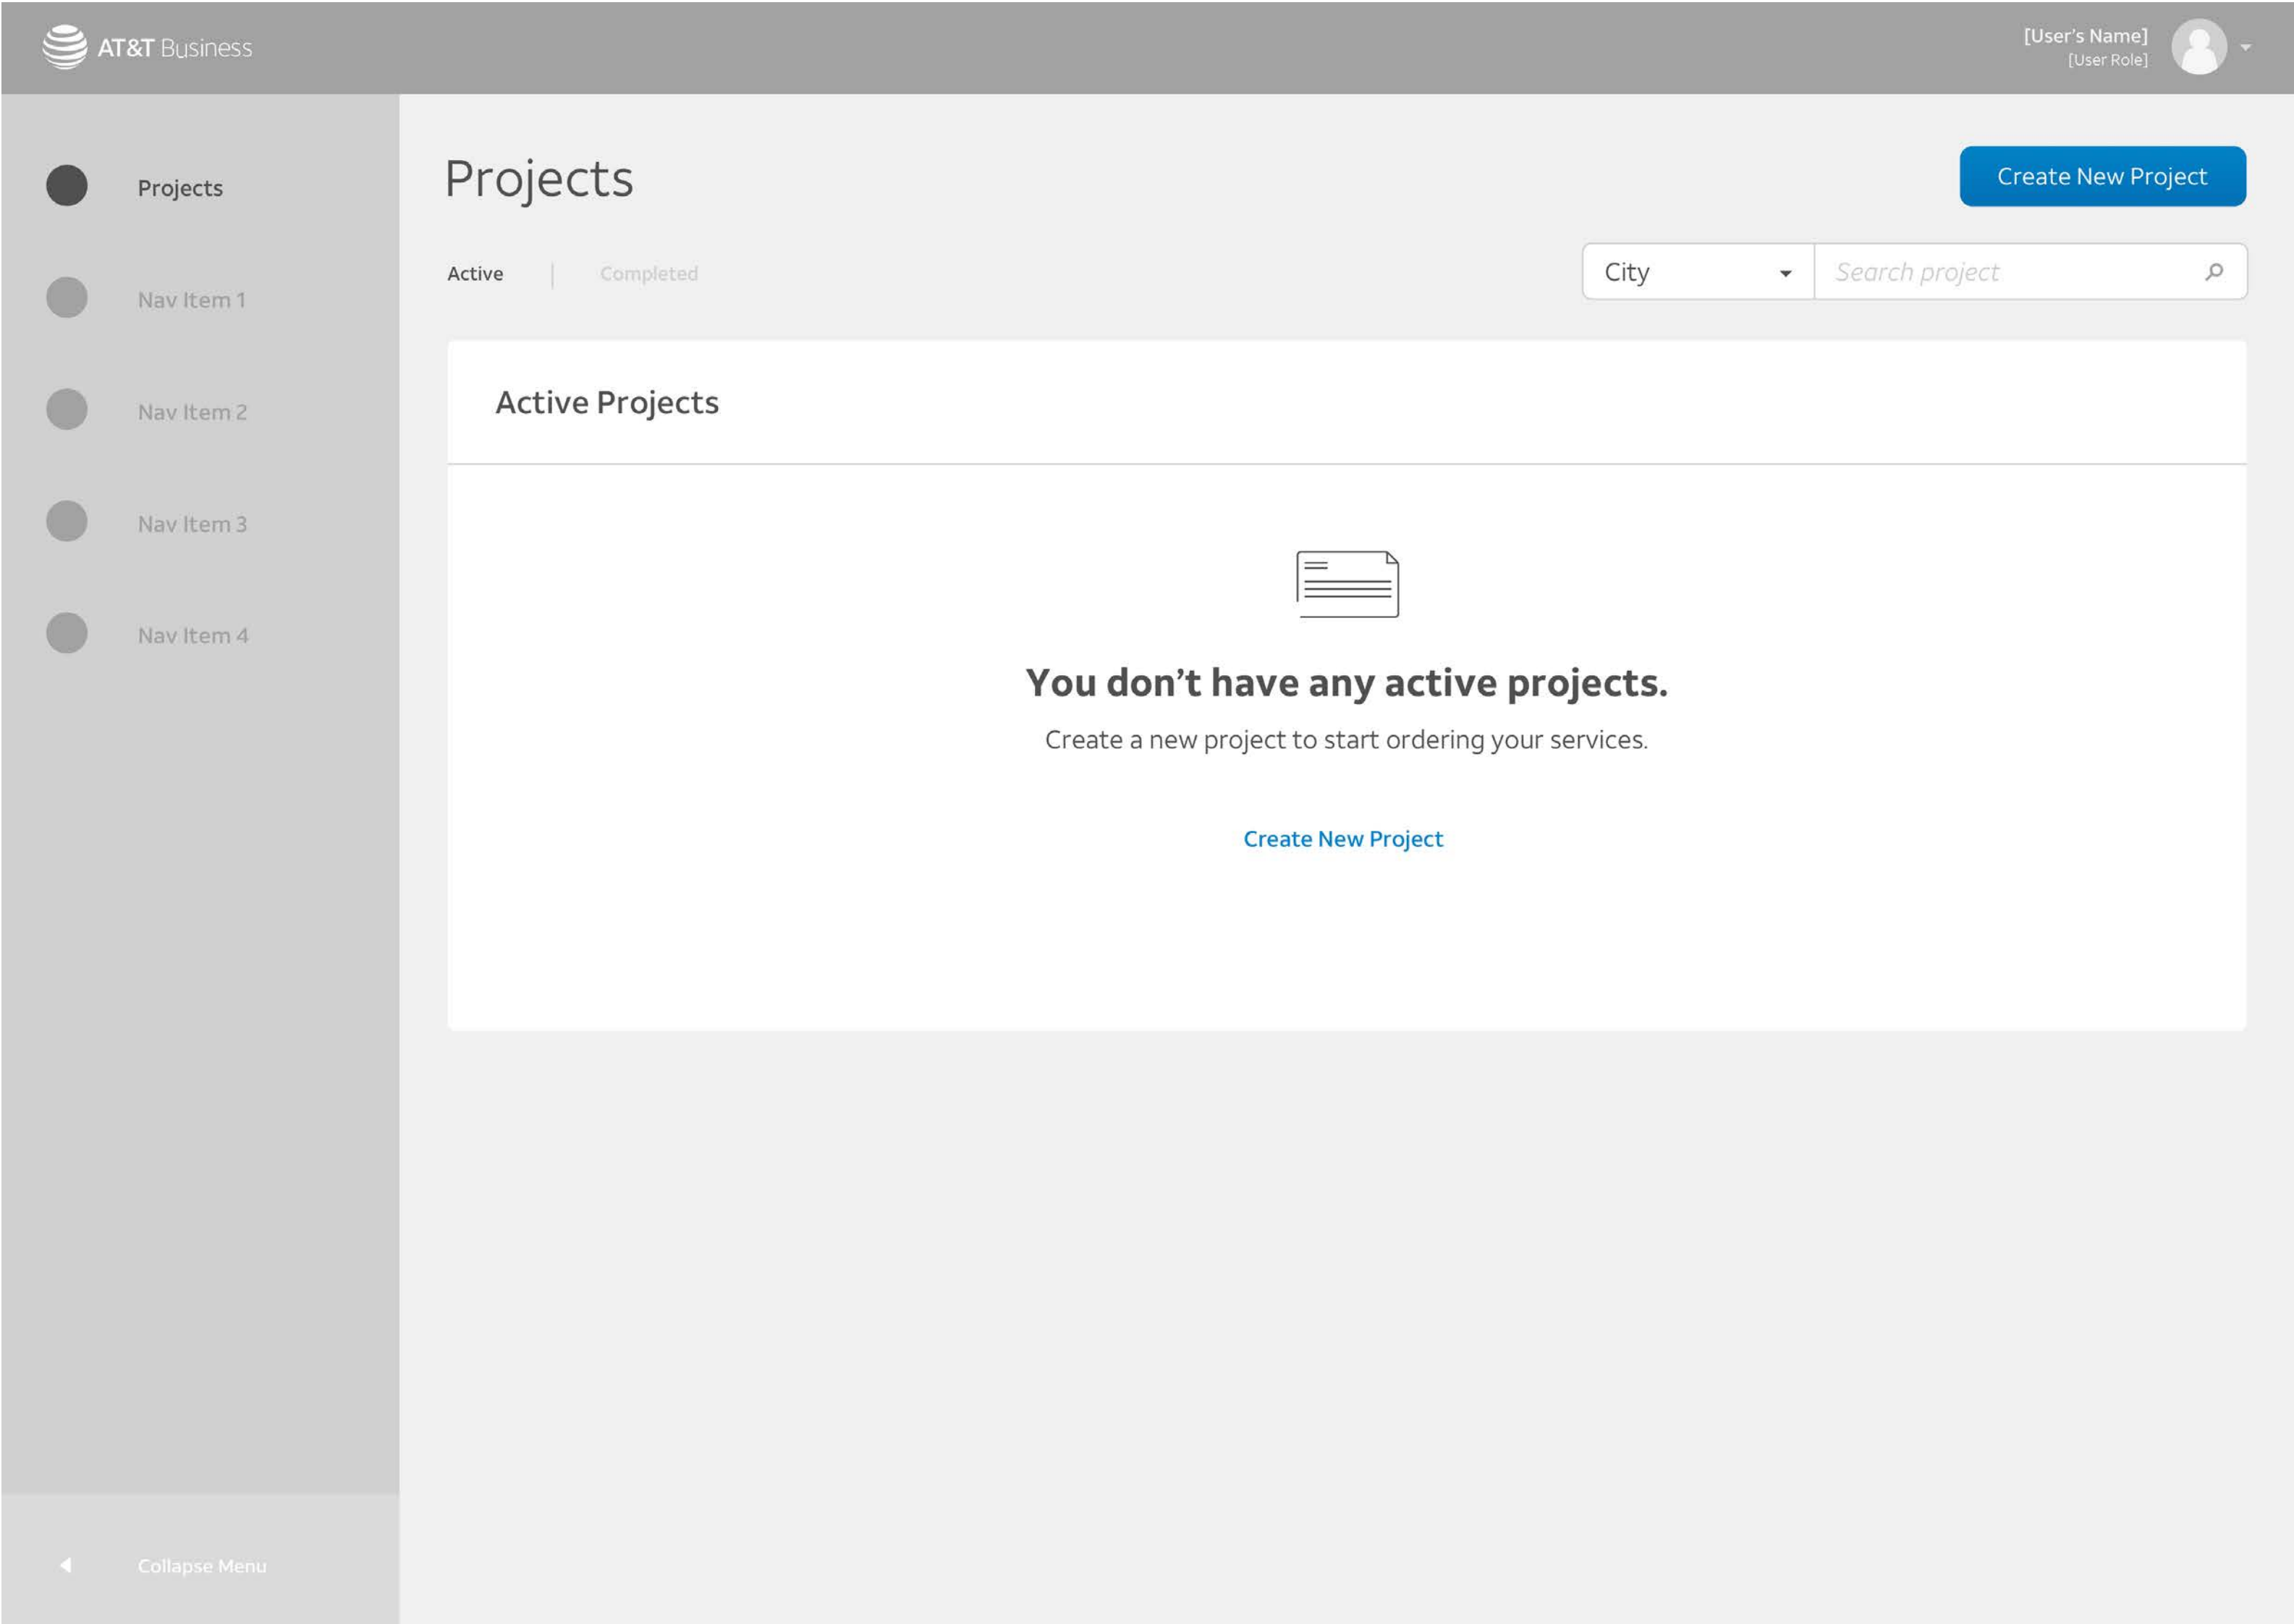

- 1
- User enters project name
- 2
- User clicks “cancel” to close dialog and cancel project creation
- 3
- User clicks “Confirm” to confirm creation of project and is taken to project summary screen

PROJECTS
Project List + Project Creation

Projects

Shown is the empty state of the projects page. The user will see some helper text to inform them to create a new project.

PROJECTS

Project List

Projects - Completed

The user will have access to completed projects in the “Completed” tab. All projects that have had all their orders submitted will live here.

- 1
- User clicks the project cell and is taken to an overview of the completed project summary. They can not edit the project summary once it’s been completed.

Project Summary

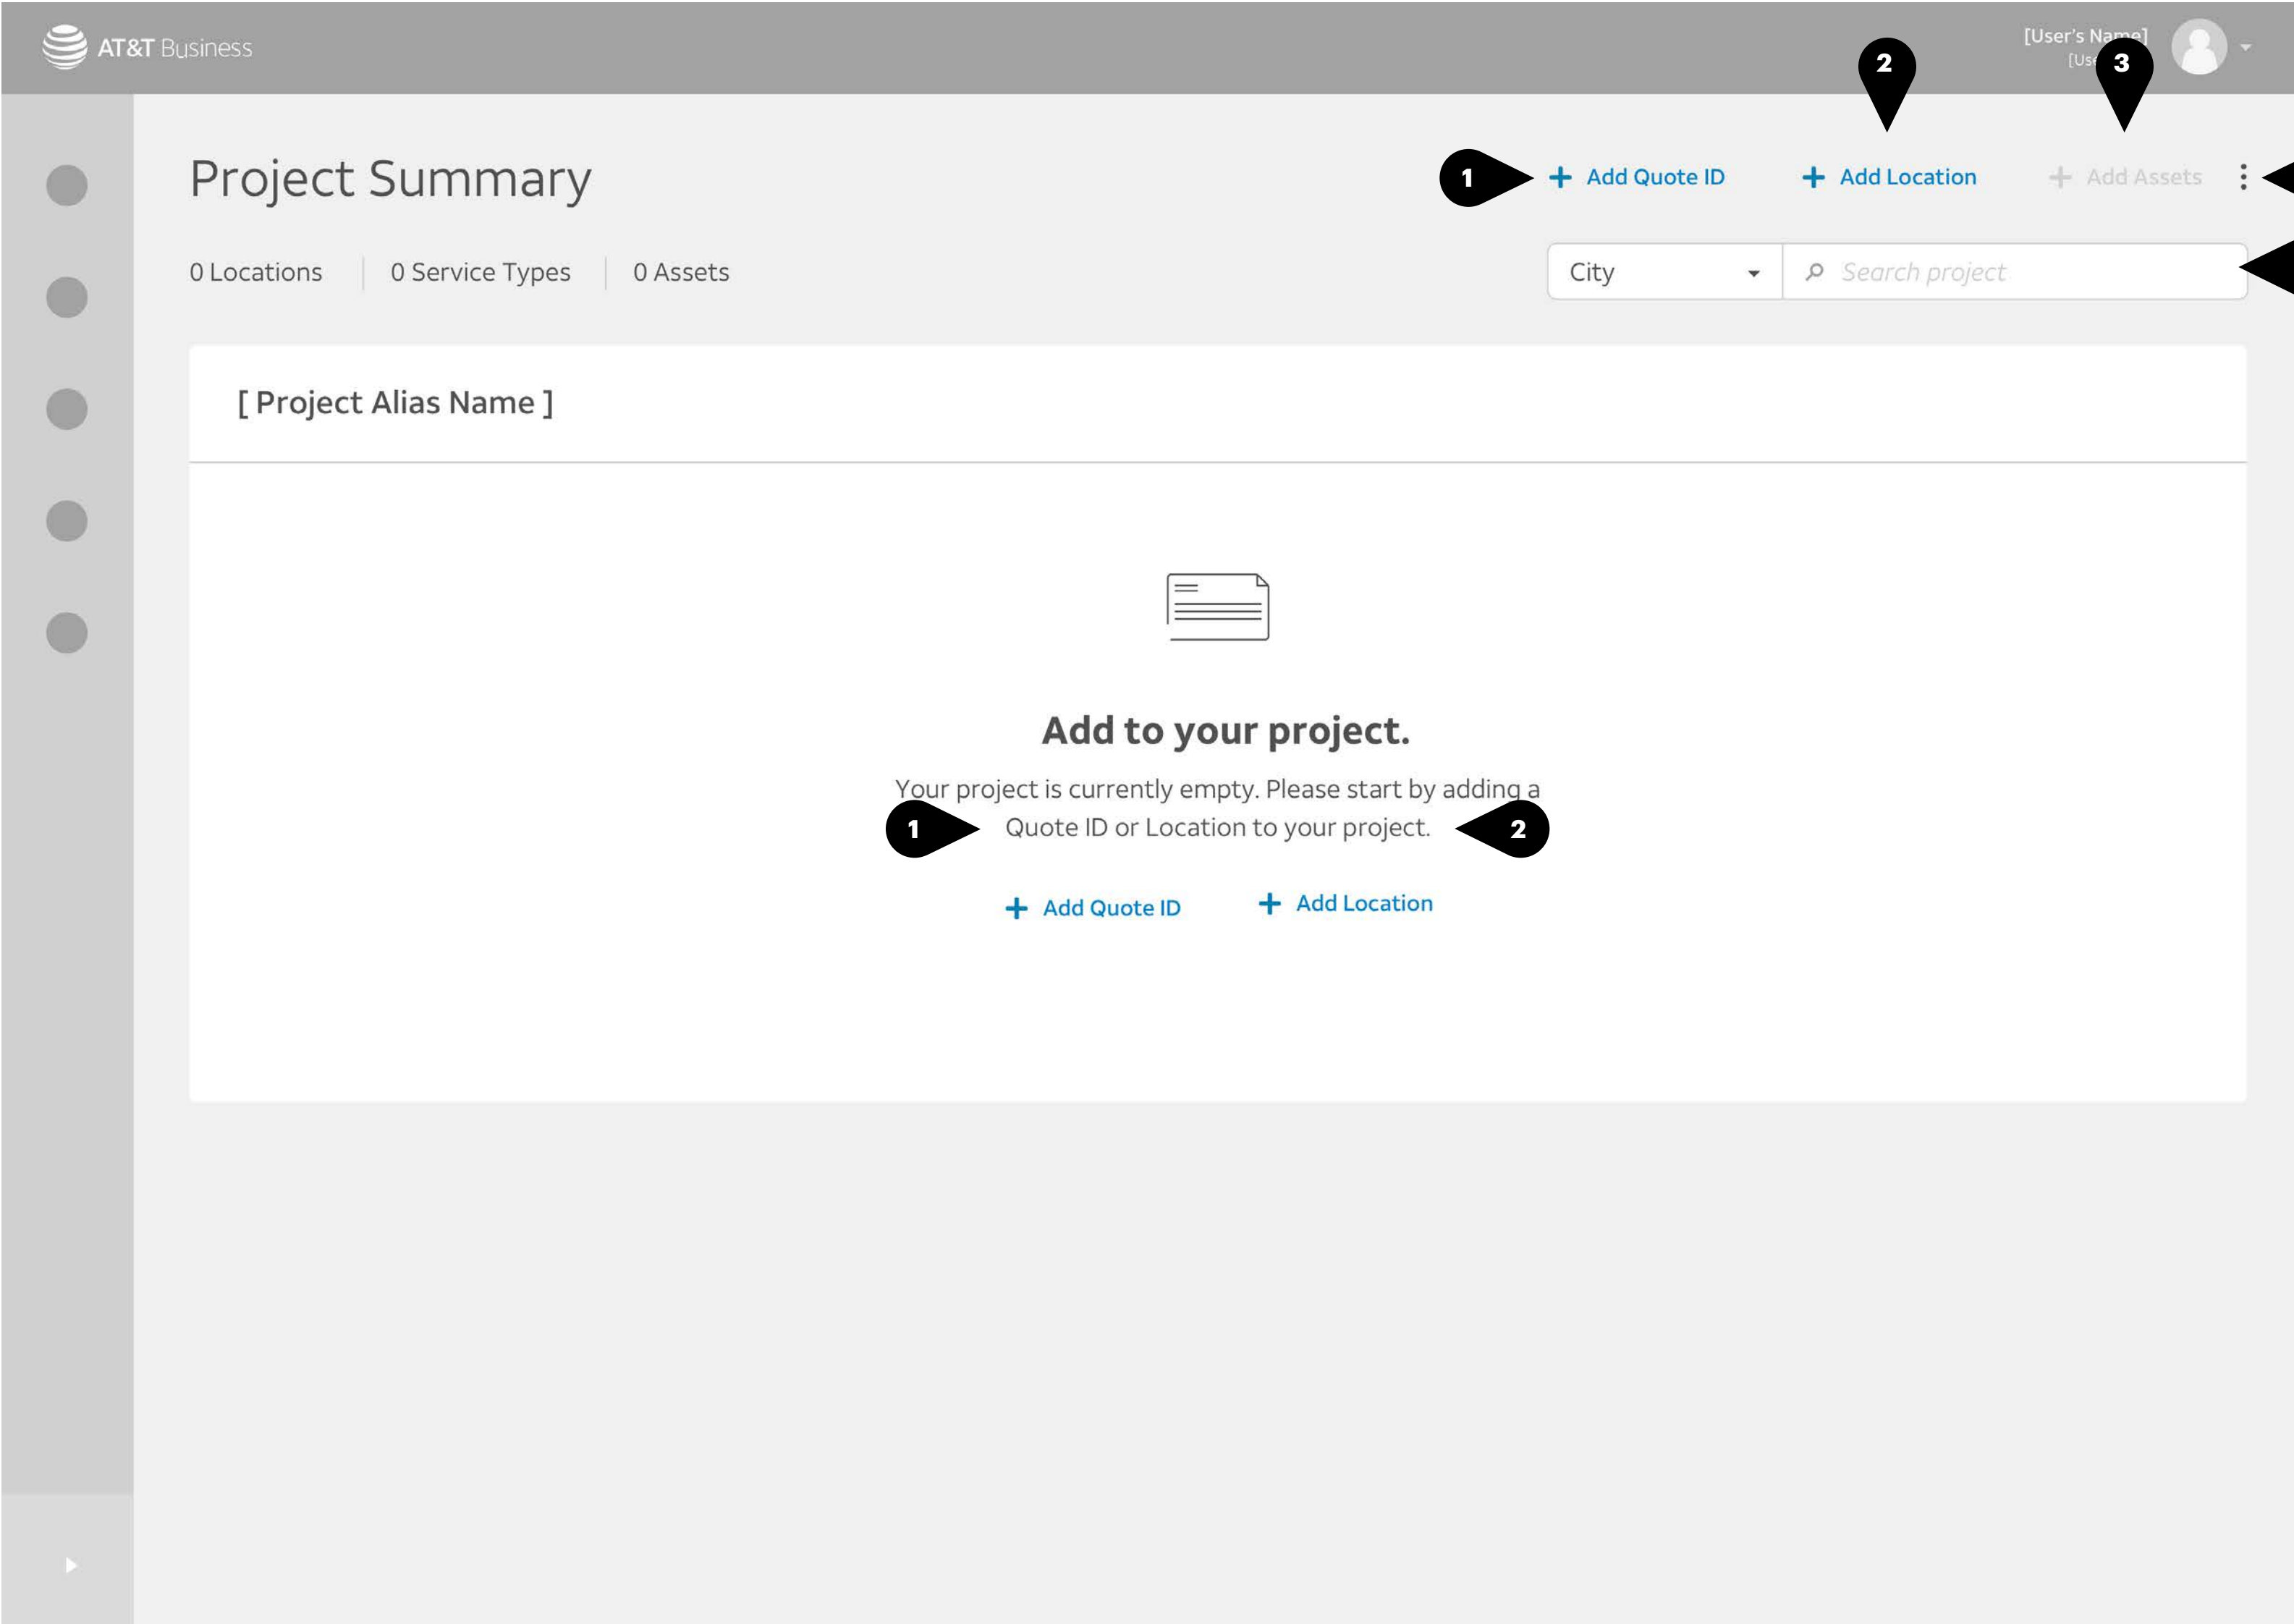

PROJECT CREATION

Project Summary

After choosing to create a new project, the user will be taken to the Project Summary. The Project Summary will serve as a roll-up of the project in it’s current state. From here the user can dive down into individual sites. Upon creating a new project, the project summary will be empty.

- 1 User clicks “Add Quote ID” and is taken to the Add quotes flow.
- 2 User clicks “Add Location” and is taken to the add site(s) screen.
- 3 User clicks “Add Asset” and is taken to the add asset(s) screen, disabled until the user has added at least one site to the project.
- 4 User clicks action overflow button and is presented with a pop over containing relevant secondary actions. (Export project and delete project)
- 5 User can search (search parameters need to be discussed)

** Projects will be automatically saved, users will be able to see a saving status.

PROJECT SUMMARY

Project Summary - View by Location

The Project Summary will serve as a roll-up of the project in it’s current state. From here the user can dive down into individual sites. Project Summary list items will be listed alphabetically by City name.

- 1 Shows the number of different locations, different service types and number of assets within the project.
- 2 User clicks “Select assets to submit” to bulk submit order of assets that are 100% configured and ready to be ordered. “Select assets to submit” will be disabled until the user has completed configuring at least one asset.
- 3 User can switch the organization view of the project list.
- View by: Location, Service, Asset
- 4 User clicks “Expand all” to expand and show all cells
- 5 User clicks “Expand” icon to expand single cell
- 6 For the Location view, the list items will ask show the number of service types and the number of assets within that project
- 7 User clicks the “collapse” icon to collapse the cell to its original state.
- 8 User clicks the “action overflow” icon to reveal nested actions such as cancel order and export.
- 9 User is presented with contextual actions to skip to that part of the ordering process.

** We removed VLAN speed from top level information

** Sorting functionality will is future feature.

PROJECT SUMMARY
Bulk Order Submitting

Bulk Submission of Configured Assets

When a user clicks “Submit configured assets” they are taken to this page. From here, they user will be able to choose from the list of 100% completed configured assets in their Project Summary they want to submit to order. On default all assets will be selected. The user will still be able to submit assets with errors if they desire.

- 1

User clicks “cancel” to exit out of bulk submission of assets and is taken back to their Project Summary
- 2

User clicks “Submit orders” to bulk submit selected assets for order. The user will then be taken to the “assets ordered” page.
- 3

Shows how many assets have been selected from the list
- 4

User clicks “select all” to select all of the assets. If all assets are already selected “select all” changes to “Deselect all”
- 5

User can click check marks to deselect assets or slick check mark boxes to select assets.

PROJECT SUMMARY
Bulk Order Submitting

Empty Asset

Shown is an example of a blank asset’s top level information. This happens when a user has created a brand new blank asset, applied an existing asset, or had copied an existing configuration.

- 1
- Asset information will only show what is available to pull from the asset’s current configuration.
- The asset would not have a quote id or configuration info available.
- 2
- The asset status will change according to the state of the asset.
- **In progress:** When a brand new asset has been created, but has not been configured.
- **Copying:** When an existing asset has been applied or an existing configuration is being applied and is processing.
- Once the copy process is complete the status will chance to “In progress.”

Add Locations - Add Existing Locations

After choosing to add locations to a project, the user will be given the options to choose existing locations, upload locations, or create new location(s) to add. The ability to add existing locations will be the functionality initially presented.

- 1** User can toggle between “Existing Locations” and “Upload Locations” to toggle the process of adding existing locations and uploading new locations via template.
- 2** User can search through existing locations (*search parameters need to be discussed*). For MVP, search functionality is based on top level information.
- 3** User can click on each list item to view the individual location details, such as the service type, and asset MDS and RDS.
- 4** User clicks on the “Add” button to add an existing location to the Project Location List.
- 5** User clicks on “Create New Location” to initiate the process of creating a brand new location.
- 6** User clicks “Cancel” to abandon the flow.
- 7** User clicks “Continue” to add the selected sites to their project and be taken back to the Project Summary. **This button will be disabled until the user adds one or more locations to their Project Location List.**

APPLY ASSETS

Existing Assets - View by Location

Existing Assets - View by Location

After adding Locations to the Project Location List, the user will be provided with the options to apply existing assets to these locations, or create a new asset to apply.

- 1
- User can toggle between “Existing assets” and “Create new asset” to toggle the process of adding existing assets and creating a new one (existing will be default).
- 2
- User clicks to filter their view based on the parameters they input (*filter is a future feature, and need to be discussed further*).
- 3
- User clicks to filter their view from Locations to Assets (*Locations will be the default view*)
- 4
- User can search through existing assets (*search parameters need to be discussed*). For MVP, search functionality is based on top level information.
- 5
- User clicks icon to expand the cell to view all individual assets within a location
- 6
- User clicks “Apply asset” to apply the existing asset to one or many project locations.
- 7
- User clicks “View details” to view the Location Details
- 8
- User clicks “Cancel” to abandon the flow
- 9
- User clicks “Continue” to add applied assets to their Project Locations. **Button will be disabled until one or more assets have been applied to one or more project locations.**

New Asset Configuration – MDS

NEW ASSET CONFIGURATION - MDS
Asset Configuration Process

Initial Configuration - Landing

When user has chosen to create a brand new asset, and they choose the action to start configuration, they will first be presented with the MDS dynamic forms. It will show the service type the the user chose in the add asset flow, the alias with location address, as well as validation status for the location.

- 1** Shown is the progress bar for Non-quote based assets. When a user has initiated a configuration action from the Project Summary or Individual Location screen, they will be taken into the configuration process correlating to the action clicked and the progress bar will show where they are in the configuration process.
- 2** User clicks action overflow to invoke overflow popover containing “Delete” and Export”.
- 3** Product specifications will the rendered by the Dynamic Forms engine to reflect the initial information that inform the larger RDS portion of the asset configuration.
- 4** Shown is a dropdown input box example. They will appear when the user has choices they can choose from vs manual input.

Asset Configuration – RDS

ASSET CONFIGURATION - RDS
Complete Configuration

Configuraton Choice

When a user chooses to either Accept a quote, or to continue the inital configuration, they are presented with this modal as a configuration choice.

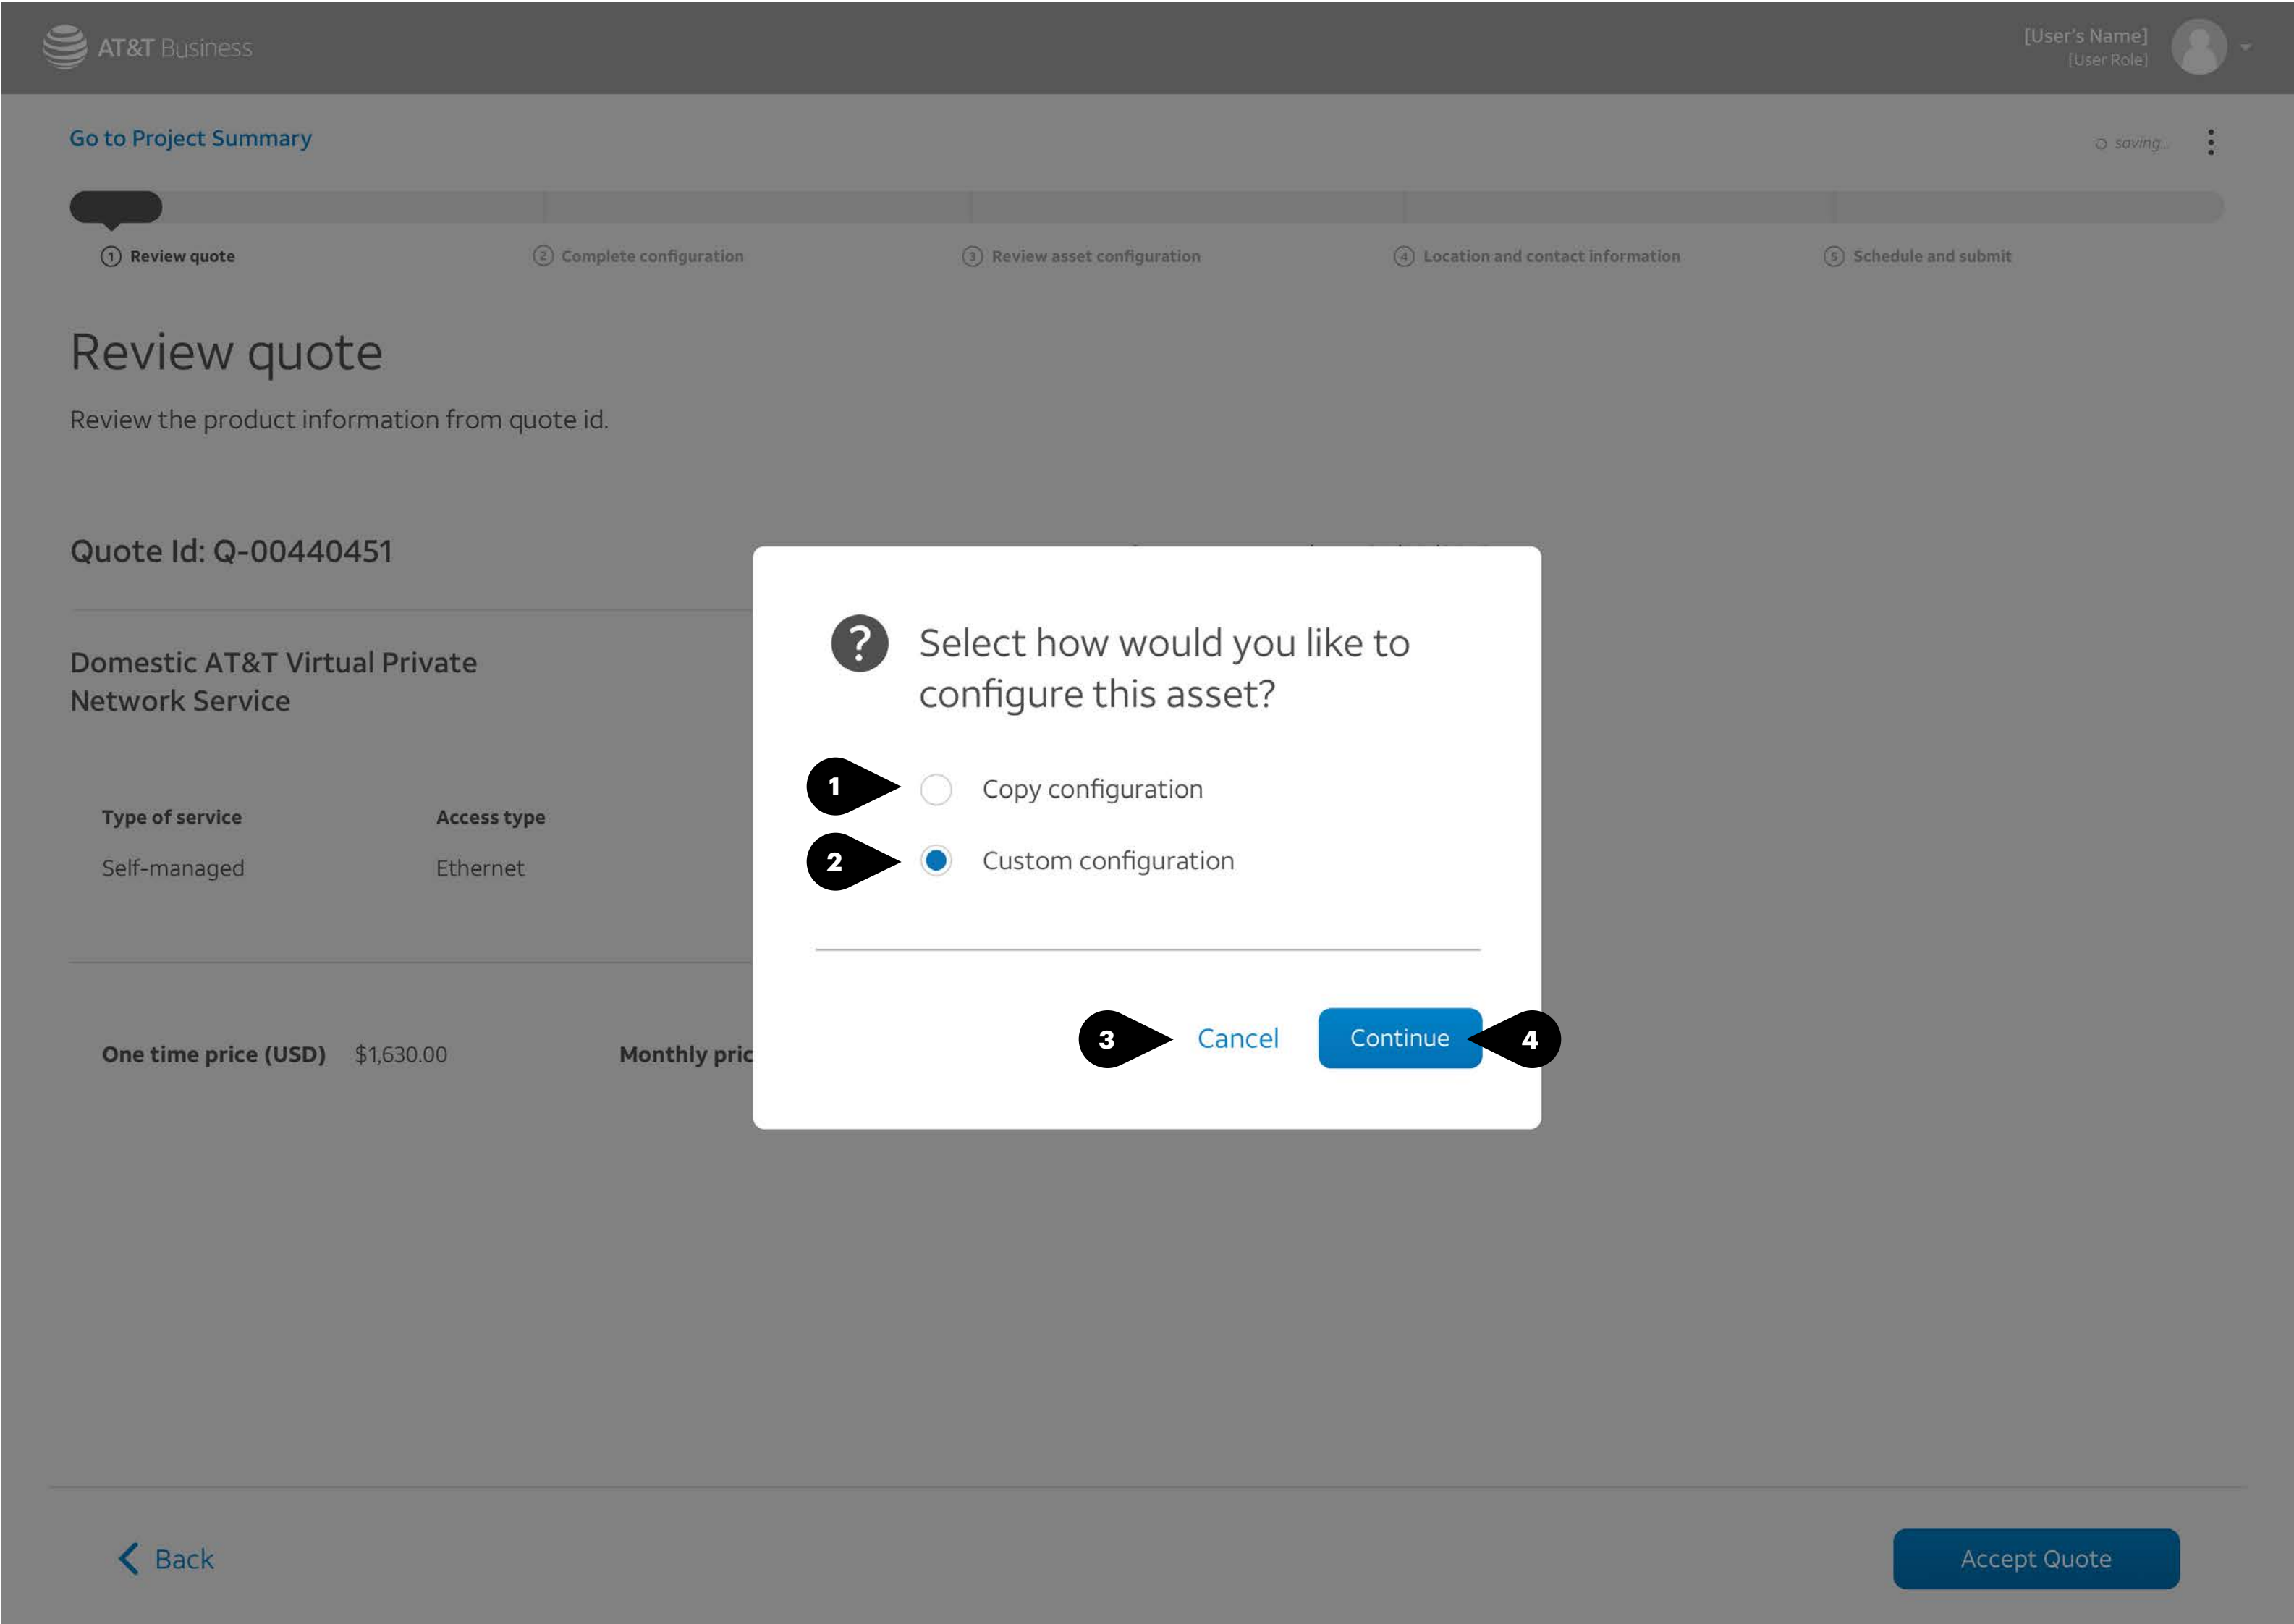

- 1

User selects “Copy configuration” if they wish to copy an existing assets configuration. If this choice is chosen, the user would be taken to the Copy Asset Configuration flow when they click “Continue”.
- 2

User selects “Custom configuration” if they wish to maually fill in all the RDS configuration details. If this choice is chosen, the user would be taken immediately to the “Complete Configuration” section of the the configuration process.
- 3

User clicks “Cancel” to dismiss the dialog.
- 4

User clicks “Continue” to the chosen destination.

ASSET CONFIGURATION - RDS
Complete Configuration

Complete Configuration - Empty

After the user has completed the initial configuration they will be taken to the next step of the configuration process (complete configuration). From here they will fill out all the RDS information needed to complete the asset's configuration and submit for order. The forms and sections will be rendered by the dynamic forms engine and business rules associated with them.

In this option, we are presenting organization through paging based on sections.

- 1** Shown is the progress bar for Non-quote based assets. Functions the same way as the previously noted progress bar.
- 2** Shown is the paging progression of the "Complete Configuration" process. The user will be taken through the complete configuration process linearly as they fill out the information for the asset. Once a user has finished a section and hit next, the secondary progress indicator will reflect what section the user is in. When sections are filled, the user can navigate back and forth through the paging but clicking either back, next, or on the section in the side progress they wish to navigate to.
- 3** Shown is an example of the styling for the dynamic forms.
- 4** The "Next" button will be disabled until the user has filled out the required information.
- 5** User clicks action overflow to invoke overflow popover containing "Delete" and Export".

INDIVIDUAL LOCATION DETAIL
Complete Configuration

Complete Configuration - Filled

Shown is an example of a filled version of the “Complete Configuration” screen with the continue button enabled. If user is configuring a brand new asset, they will have the option to either enter the configuration manually, OR copy the RDS of an existing asset. If this asset was a copied asset from the Add Assets flow in the Project summary, then the input fields will be prefilled. The user will still have the ability to edit the fields.

- 1
- This option is still present and available within this step. User clicks “copy configuration” and is taken to the “Copy RDS Configuration” flow. The copied configuration will fill in all relevent configuration inputs when the user navigates back to this screen from the copy RDS flow.
- 2
- Once the required information is filled, the next button is enabled. User clicks “Next” and is taken to the next section designated in the side progression nav.

Complete Configuration - All 1 Page,
No “Jump to” Side Nav

Shown is an alternate version of the “Complete Configuration” section. This is a version where everything is laid out on a single page with no other form of navigation. The convenience factor for this version is lower than the other two versions and could also be a bit more clunky due to the rendering time for all input fields.

Asset Config. Copy RDS

ASSET CONFIG - COPY RDS
Choose Asset to Copy Configuration

Choose Asset to Copy Configuration

If the user chooses to copy an existing configuration for one of their assets, they will be taken to this screen showing all existing assets within the same service type.

- 1
- User clicks to filter their view based on the parameters they input (*filter is a future feature, and need to be discussed further*).
- 2
- User can search through existing assets (*search parameters need to be discussed*).
- 3
- User clicks on the Asset ID to see the configuration of each asset
- 4
- User clicks “Copy” to copy to copy an individual asset’s configuration.
- 5
- Within the Project Asset information, the “Copied Configuration” section will be blank until an asset has been chosen.
- 6
- The user clicks “Cancel” to abandon this screen and return back to inputting a configuration manually for this project asset.
- 7
- User clicks “Continue” to confirm and copy the configuration and return back to the ordering process. **This button will be disabled until the user selects an asset to copy from.**
